

INNOVATIONS 23.3

SOFTWARE INNOVATIONS

The new software version Jaltest 23.3 once again offers more improvements and innovations that consolidate this tool as a benchmark in multi-brand diagnostics for commercial vehicles, agricultural equipment, OHW equipment, material handling equipment and vessels.

With the innovations of the graphic interface, it is possible to:

- Show the battery voltage during the system scan processes.
- Set the fault code display during the system scan processes.
- Hide the information panel in action steps with measurements.
- Restart the connection when losing the communication with systems in different sections of the application.
- Customize connection images.
- Set measurement groups in the data recorder function.

In addition, with GRP it is possible to associate diagnostics reports to license plates and/or VIN chassis numbers that do not belong to any vehicle from the list.
